

# (My)SQL Cheat Sheet

Here are the most commonly used SQL commands and the most commonly used options for each. There are many more commands and options than listed here. In other words, the syntaxes as I have listed them are far from complete. See the links at the bottom for more complete syntaxes and more commands.

| MySQL Command-Line |  |  |
|--------------------|--|--|
| What               | How  | Example(s)   |
| Running MySQL      | <code>mysql -uusername -ppassword</code>                                     | <code>mysql -ucusack2RO -pegbdf5s</code>   |
| Importing          | <code>mysql -uusername -ppassword &lt; filename</code>                       | <code>mysql -usomeDB -pblah &lt; myNewDB.sql</code>  |
| Dumping (Saving)   | <code>mysqldump -uusername -ppassword database [tables] &gt; filename</code> | <code>mysqldump -ume -pblah myDB &gt; My.sql</code><br><code>mysqldump -ume -pblah myDB table1 table2 &gt; my.sql</code> |

| Common MySQL Column Types       |  |   |
|---------------------------------|--|---|
| Purpose                         | Data Type                                | Example   |
| Integers                        | <code>int(<i>M</i>)</code>               | <code>int(5)</code>   |
| Floating-point (real) numbers   | <code>float(<i>M,D</i>)</code>           | <code>float(12,3)</code>  |
| Double-precision floating-point | <code>double(<i>M,D</i>)</code>          | <code>double(20,3)</code>   |
| Dates and times                 | <code>timestamp(<i>M</i>)</code>         | <code>timestamp(8)</code> (for YYYYMMDD)<br><code>timestamp(12)</code> (for YYYYMMDDHHMMSS) |
| Fixed-length strings            | <code>char(<i>M</i>)</code>              | <code>char(10)</code>   |
| Variable-length strings         | <code>varchar(<i>M</i>)</code>           | <code>varchar(20)</code>  |
| A large amount of text          | <code>blob</code>                        | <code>blob</code>   |
| Values chosen from a list       | <code>enum('value1','value2',...)</code> | <code>enum('apples','oranges','bananas')</code>   |

*M* is maximum to display, and *D* is precision to the right of the decimal.

| MySQL Mathematical Functions |                                | MySQL String Functions               |  |
|------------------------------|--------------------------------|--------------------------------------|--|
| What                         | How                            | What                                 | How  |
| Count rows per group         | <code>COUNT(column   *)</code> | Compare strings                      | <code>strcmp(string1,string2)</code>         |
| Average value of group       | <code>AVG(column)</code>       | Convert to lower case                | <code>lower(string)</code>                   |
| Minumum value of group       | <code>MIN(column)</code>       | Convert to upper case                | <code>upper(string)</code>                   |
| Maximum value of group       | <code>MAX(column)</code>       | Left-trim whitespace (similar right) | <code>ltrim(string)</code>                   |
| Sum values in a group        | <code>SUM(column)</code>       | Substring of string                  | <code>substring(string,index1,index2)</code> |
| Absolute value               | <code>abs(number)</code>       | Encrypt password                     | <code>password(string)</code>                |
| Rounding numbers             | <code>round(number)</code>     | Encode string                        | <code>encode(string,key)</code>              |
| Largest integer not greater  | <code>floor(number)</code>     | Decode string                        | <code>decode(string,key)</code>              |
| Smallest integer not smaller | <code>ceiling(number)</code>   | Get date                             | <code>curdate()</code>                       |
|                              |                                | Get time                             | <code>curtime()</code>                       |
|                              |                                | Extract day name from date           | <code>dayname(string)</code>                 |

|                                      |   |  |
|--------------------------------------|---|--|
| Square root                          | <code>sqrt(<i>number</i>)</code>              | string   |
| <i>n</i> th power                    | <code>pow(<i>base</i>,<i>exponent</i>)</code> | Extract day number from date <code>dayofweek(<i>string</i>)</code>   |
| random number <i>n</i> , $0 < n < 1$ | <code>rand()</code>                           | string   |
| sin (similar cos, etc.)              | <code>sin(<i>number</i>)</code>               | Extract month from date string <code>monthname(<i>string</i>)</code> |

| Basic MySQL Commands                  |   |   |
|---------------------------------------|---|---|
| What                                  | How   | Example(s)                                      |
| List all databases                    | SHOW DATABASES;   | SHOW DATABASES;                                 |
| Create database                       | CREATE DATABASE <i>database</i> ;                           | CREATE DATABASE PhoneDB;                        |
| Use a database                        | USE <i>database</i> ;                                       | USE PhonDB;                                     |
| List tables in the database           | SHOW TABLES;  | SHOW TABLES;                                    |
| Show the structure of a table         | DESCRIBE <i>table</i> ;<br>SHOW COLUMNS FROM <i>table</i> ; | DESCRIBE Animals;<br>SHOW COLUMNS FROM Animals; |
| Delete a database ( <i>Careful!</i> ) | DROP DATABASE <i>database</i> ;                             | DROP DATABASE PhoneDB;                          |

| SQL Commands: Modifying |  |  |
|-------------------------|--|--|
| What                    | How  | Example(s)   |
| Create table            | CREATE TABLE <i>table</i> (<br><i>column1 type</i> [[NOT] NULL]<br>[AUTO_INCREMENT],<br><i>column2 type</i> [[NOT] NULL]<br>[AUTO_INCREMENT],<br>...<br><i>other options</i> ,<br>PRIMARY KEY ( <i>column(s)</i> ) );  | CREATE TABLE Students (<br>LastName varchar(30) NOT NULL,<br>FirstName varchar(30) NOT NULL,<br>StudentID int NOT NULL,<br>Major varchar(20),<br>Dorm varchar(20),<br>PRIMARY KEY (StudentID) );   |
| Insert data             | INSERT INTO <i>table</i> VALUES<br>( <i>list of values</i> );<br>INSERT INTO <i>table</i> SET<br><i>column1= value1</i> ,<br><i>column2= value2</i> ,<br>...<br><i>columnk= valuek</i> ,<br>INSERT INTO <i>table</i> ( <i>column1,column2,...</i> )<br>VALUES ( <i>value1,value2...</i> ); | INSERT INTO Students VALUES<br>('Smith','John',123456789,'Math','Selleck');<br>INSERT INTO Students SET<br>FirstName='John',<br>LastName='Smith',<br>StudentID=123456789,<br>Major='Math';<br>INSERT INTO Students<br>(StudentID,FirstName,LastName)<br>VALUES (123456789,'John','Smith'); |
| Insert/Select           | INSERT INTO <i>table</i> ( <i>column1,column2,...</i> )<br>SELECT <i>statement</i> ;<br>(See below)  | INSERT INTO Students<br>(StudentID,FirstName,LastName)<br>SELECT StudentID,FirstName,LastName<br>FROM OtherStudentTable;<br>WHERE LastName like '%son';  |
| Delete data             | DELETE FROM <i>table</i><br>[WHERE <i>condition(s)</i> ];<br><br>(Omit <b>WHERE</b> to delete all data)  | DELETE FROM Students<br>WHERE LastName='Smith';<br>DELETE FROM Students<br>WHERE LastName like '%Smith%';<br>AND FirstName='John';<br>DELETE FROM Students;  |
| Updating Data           | UPDATE <i>table</i> SET<br><i>column1= value1</i> ,<br><i>column2= value2</i> ,<br>...<br><i>columnk= valuek</i><br>[WHERE <i>condition(s)</i> ];  | UPDATE Students SET<br>LastName='Jones' WHERE<br>StudentID=987654321;<br>UPDATE Students SET<br>LastName='Jones', Major='Theatre'<br>WHERE StudentID=987654321 OR<br>(MAJOR='Art' AND FirstName='Pete');   |
| Insert column           | ALTER TABLE <i>table</i> ADD COLUMN  | ALTER TABLE Students ADD COLUMN  |

|                                  |   |   |
|----------------------------------|---|---|
|                                  | <i>column type options;</i>                             | Hometown varchar(20);                     |
| Delete column                    | ALTER TABLE <i>table</i><br>DROP COLUMN <i>column</i> ; | ALTER TABLE Students<br>DROP COLUMN Dorm; |
| Delete table ( <i>Careful!</i> ) | DROP TABLE [IF EXISTS] <i>table</i> ;                   | DROP TABLE Animals;                       |

| SQL Commands: Querying |   |  |
|------------------------|---|--|
| What                   | How   | Example(s)   |
| All columns            | SELECT * FROM <i>table</i> ;  | SELECT * FROM Students;  |
| Some columns           | SELECT <i>column1,column2,...</i> FROM <i>table</i> ;   | SELECT LastName, FirstName FROM Students;  |
| Some rows/<br>columns  | SELECT <i>column1,column2,...</i><br>FROM <i>table</i><br>[WHERE <i>condition(s)</i> ];   | SELECT LastName,FirstName<br>FROM Students<br>WHERE StudentID LIKE '%123%';  |
| No Repeats             | SELECT [DISTINCT] <i>column(s)</i><br>FROM <i>table</i> ;   | SELECT DISTINCT LastName<br>FROM Students;   |
| Ordering               | SELECT <i>column1,column2,...</i><br>FROM <i>table</i><br>[ORDER BY <i>column(s)</i> [DESC]];   | SELECT LastName,FirstName<br>FROM Students<br>ORDER BY LastName, FirstName DESC;   |
| Column<br>Aliases      | SELECT <i>column1</i> [AS <i>alias1</i> ],<br><i>column2</i> [AS <i>alias2</i> ], ...<br>FROM <i>table1</i> ;   | SELECT LastName,FirstName AS First<br>FROM Students;   |
| Grouping               | SELECT <i>column1,column2,...</i><br>FROM <i>table</i><br>[GROUP BY <i>column(s)</i> ];   | SELECT LastName,COUNT(*)<br>FROM Students<br>GROUP BY LastName;  |
| Group Filtering        | SELECT <i>column1,column2,...</i><br>FROM <i>table</i><br>[GROUP BY <i>column(s)</i> ]<br>[HAVING <i>condition(s)</i> ];  | SELECT LastName,COUNT(*)<br>FROM Students<br>GROUP BY LastName<br>HAVING LastName like '%son';   |
| Joins                  | SELECT <i>column1,column2,...</i><br>FROM <i>table1,table2,...</i><br>[WHERE <i>condition(s)</i> ];   | SELECT LastName,Points<br>FROM Students,Assignments<br>WHERE AssignmentID=12 AND<br>Students.StudentID=Assignments.StudentID;  |
| Table<br>Aliases       | SELECT <i>column1,column2,...</i><br>FROM <i>table1</i> [ <i>alias1</i> ],<br><i>table2</i> [ <i>alias2</i> ],...<br>[WHERE <i>condition(s)</i> ];  | SELECT LastName,Points<br>FROM Students S,Assignments A<br>WHERE S.StudentID=A.StudentID AND<br>A.AssignmentID=12;   |
| Everything             | SELECT [DISTINCT]<br><i>column1</i> [AS <i>alias1</i> ],<br><i>column2</i> [AS <i>alias2</i> ], ...<br>FROM <i>table1</i> [ <i>alias1</i> ],<br><i>table2</i> [ <i>alias2</i> ],...<br>[WHERE <i>condition(s)</i> ]<br>[GROUP BY <i>column(s)</i> ]<br>[HAVING <i>condition(s)</i> ]<br>[ORDER BY <i>column(s)</i> [DESC]]; | SELECT Points, COUNT(*) AS Cnt<br>FROM Students S,Assignments A<br>WHERE S.StudentID=A.StudentID AND<br>A.AssignmentID=12<br>GROUP BY Points<br>HAVING Points > 10<br>ORDER BY Cnt, Points DESC; |
